

NEW MARINE TOILET REVOLUTIONIZES BOATING EXPERIENCE

Never before have so many innovative features been combined into one revolutionary toilet and at such an affordable price. From Raritan, the most dependable name on the water, comes the most advanced toilet in its class, the state-of-the-art Marine Elegance. Employing new Vortex-Vac Flush technology, the innovative Marine Elegance creates a vacuum in the bowl for the quietest and most efficient flushing action of any comparable toilet on the market.

Performing at a noise level less than 63 decibels, the sophisticated toilet ensures a sound night sleep for guests aboard. Incredibly compact, it has a small footprint of just 8-1/2" x 9-3/4", making installations in tight spaces simple.

Offering an angled back for a contoured fit, the stunning Marine Elegance provides a sleek, one-piece vitreous china bowl and full-size toilet seat. Due to its durable construction, it has a higher strength-to weight-ratio than competitors. A contemporary mounting system enables a streamlined presentation and easy cleaning.

A fully-programmable Raritan Smart Flush Control gives users four flush options for maximum flexibility. With an attractive wall-mount design, the low-profile control has several features available, including a lock-out when the holding tank is full. In addition to the Smart Flush Control, other flush controls are available upon request.

The Marine Elegance can be flushed normally or with a low water option. An environmentally-friendly function helps conserve precious water onboard and extends the useful capacity of most holding tanks. Water can also be added to the bowl before use. A unique discharge loop eliminates odors and enables the bowl to hold water similar to home toilets. Specially-designed holes under the bowl rim deliver unmatched rinsing capabilities with less water.

Powerful, Raritan's Marine Elegance can pump an amazing 10' vertically and 100' horizontally. Unlike typical vacuum toilet systems, a convenient, built-in shredder with stainless steel blades transforms waste into small particles to reduce clogs. The Vortex-Vac Flush technology eliminates the need for outdated vacuum pumps and tanks, as well as foot pedals and other mechanical components that can fail.

Built for the harsh marine environment, the reliable Marine Elegance features a heavy-duty motor coated with epoxy paint. Available in 12 and 24V units, Raritan's Marine Elegance comes in pressurized fresh water and remote intake pump raw water models.

The economical Marine Elegance from Raritan has a suggested retail price of just \$899.00 for a freshwater model with the smart flush control. An informative virtual presentation on the new Marine Elegance can be downloaded at www.raritaneng.com/images/raritan2.swf.
